Fund Profile and Strategy

Discovery Invest's CROCI Europe Fund tracks the performance of Deutsche Bank's CROCI Euro II Total Return Index. This index is a quantitative equally weighted basket of companies selected from the Euro Stoxx 50 Index, excluding financials. Constituents are selected monthly for their attractive valuation, defined as the cheapest trailing economic P/E. Economic P/E is calculated from the proprietary CROCI methodology.

Who Should Invest

The fund is suitable for investors looking for exposure to European equities and the Euro while seeking capital growth over the long term.

Why You Would Select This Fund

Global equity exposure - you want exposure to global equity markets over the long term.

Diversification - the fund can be used to diversify your investment portfolio and access returns from equity markets outside South Africa.

Currency- exposure to offshore equities allows for your investment to be exposed to currency movements.

Historical Performance Of Lump Sum Investment

Historical Performance Table

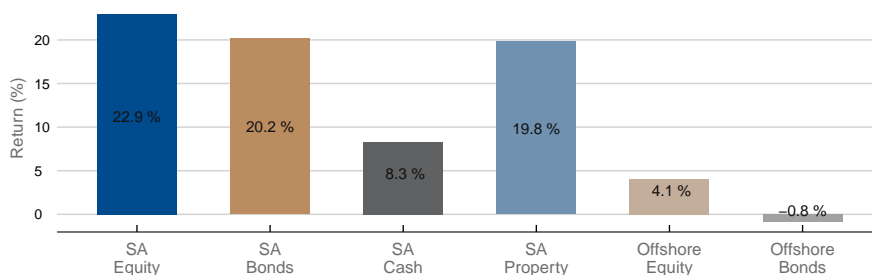

Period	Fund	Benchmark
1 year (Ann.)	-4.14%	2.80%
3 year (Ann.)	9.15%	21.02%
5 year (Ann.)	8.23%	16.45%
10 year (Ann.)	7.98%	10.75%
Since Launch (Ann.)	7.85%	8.57%
Since Launch (Cum.)	272.66%	318.49%

Risk Statistics Table

Statistic	Fund
Volatility (Last 3 Years Ann.)	18.30%
Maximum Drawdown	-45.01%
Best Annual Return	64.04%
Worst Annual Return	-37.15%
Sharpe Ratio (Rf = 0%)	0.43
Information Ratio	-0.09

Performance figures are calculated using the Total Returns Index (TRI) for a lump sum investment. The TRI is calculated by purchasing and reinvesting units on the declaration date at the Net Asset Value (NAV) price as at the reinvestment date. The TRI on any day is adjusted for NAV movements and dividend declarations. The performance is shown as net of asset management fees.

Specific Fund Risks

Currency exchange risk - Changes in the relative values of different currencies may adversely affect the value of the Fund's investments and any related income.

Default risk - There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivatives risk - The use of derivatives may increase the overall risk in the Fund by multiplying the effect of both gains and losses. This may lead to large changes in the value of the Fund and potentially large financial loss.

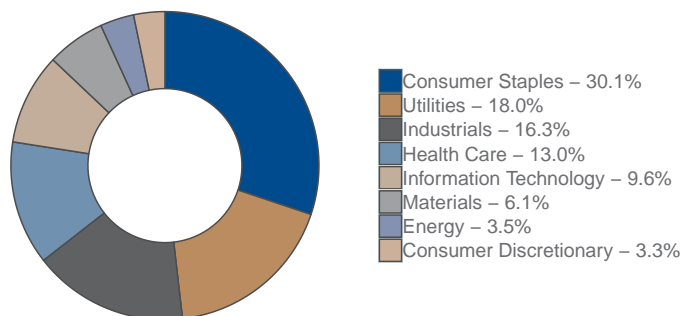

Developing market risk - Some of the countries in which the Fund invests may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Interest rate risk - The value of fixed income investments (e.g. bonds) tends to decrease when interest rates and/or inflation rises.

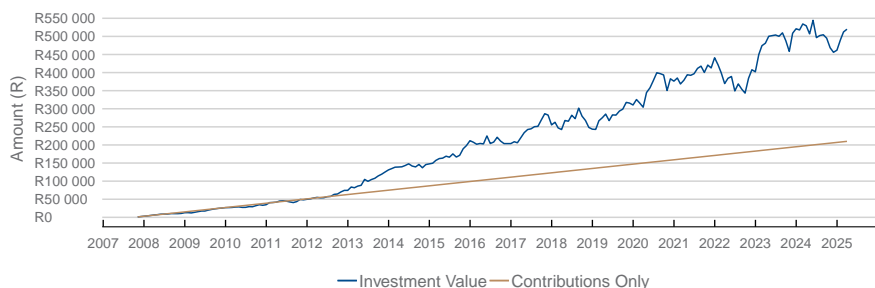

Multi-asset investment risk - The Fund is subject to possible financial losses in multiple markets and may underperform more focused funds.

Third party operational risk - The Fund's operations depend on third parties. Investors in the Fund may suffer disruption or financial loss in the event of third-party operational failure.
